CLAYTECH® CLAY TENNIS COURTS

THE BEST OF CLAY AND HARD COURTS, ROLLED INTO ONE.

More tennis courts than ever before are being converted to clay court systems.

One reason is because clay courts bring players more enjoyment with fewer injuries at every stage of life. Of equal importance, clay courts help players develop and refine the core skills needed to succeed in tennis — footwork and balance skills, physical and mental endurance and a wide repertoire of shots.

Now there is a court surface that blends these benefits with the easier, more cost-effective maintenance feature of a hard court – ClayTech.

MINIMAL MAINTENANCE AND EXPENSE

Hard court care is simple, requiring little expertise, equipment or knowledge. The same can be said about ClayTech courts. An occasional sweep and spritz of water and the court is ready for play. The court only needs care just prior to play. ClayTech courts are also more durable than hard courts. The surface covers holes and cracks and the polypropylene membrane contributes to a long life. Playing lines are painted in place during installation, and last for several years without attention.

ALL-WEATHER PLAYABILITY

ClayTech is the first truly all-weather tennis court. Hard courts are characterized as all weather, but you can't safely use them during rain or snow. What's so amazing about ClayTech is that your footing remains safe and substantially unchanged, whether it's wet, dry, hot or freezing cold.

EASY INSTALLATION – PROVEN TRACK RECORD

ClayTech is easily applied to an existing hard court surface with minimal preparation. It gets fully glued down and in-filled with Har-Tru to give it the look and feel of clay without the associated care. The lines are a special filler material that lasts for years. Players love the look and feel of the court while owners love the lack of maintenance.

ClayTech courts have a proven track record. ClayTech courts have been installed in Europe for more than 10 years and in the United States for more than 5 years. Contact us today and we will help you obtain several quotes for installing ClayTech at your facility.

CLAY COURT	VS	HARD COURT
CLAY		HARD
Master movement and balance		One-dimensional
Learn to slide		Not a chance
Develop all shots		Power-shots only
Reduce injuries		85% more injuries than clay
Play in all weather		Not playable in all weather
Easy and cost-efficient to maintain		Easy and cost-efficient to maintain
